## Medium Term Plan: Supporting Implementation of LTP/Progression Grid Subject: Computing – Programming: Selection in Quizzes UKS2 Year 6 NC/PoS: design, write and debug programs that accomplish specific goals, including controlling or simulating physical systems; solve problems by decomposing them into smaller parts use sequence, selection, and repetition in programs; work with variables and various forms of input and output use logical reasoning to explain how some simple algorithms work and to detect and correct errors in ٠ algorithms and programs select, use and combine a variety of software (including internet services) on a range of digital devices to design and create a range of programs, systems and content that accomplish given goals, including collecting, analysing, evaluating and presenting data and information Prior Learning (what pupils already know and can do) Understanding giving and following instructions, using floor robots to create and debug programs, creating a sequence of commands to follow a routed, using Scratch Jnr to create a program using blocks, how to add music and link to motion, how to use the pen tool within programmes, how to use repeat and create countcontrolled loops, how to create a programme in a text-based language End Points (what pupils MUST know and remember) To explain how selection is used in computer programs To relate that a conditional statement connects a condition to an outcome To explain how selection directs the flow of a program To design, create and evaluate a program that uses selection **Key Vocabulary** Selection, condition, count-controlled loop, outcomes, conditional statement (the linking together of a condition and outcomes), debug, **Recommended Resources:** https://tinyurl.com/UKS2-SelectionInOuizzes https://tinyurl.com/UKS2-SelectionInOuizzes-OA Unplugged activities provide possible opportunities for the children to record. Session 1: Selection and Conditions Using the recommended resources, children should be able to answer these questions: What is meant by a condition? What is meant by selection? How do they impact the flow of actions within a program? How can we modify the conditions within an existing program? How can we use 'if... then... else...' to change the outcome of the program? Why do we need to use repetition to check the conditions? Can we use the existing code to create our own? Unplugged activity – children to be given an example program and to state what will happen. Vocabulary: Selection, condition, count-controlled loop Session 2: Asking questions Using the recommended resources, children should be able to answer these questions:

V3 (September 2023)

Medium Term Plan: Supporting Implementation of LTP/Progression Grid

How can conditions and selection be used together to create a question? What actions will need to be considered when creating a 'yes/no' question? If the answer is a condition, what selection structure will need to be considered? Can we design a program within Scratch which used selection to direct the flow of the program? How can we test the program? Are we able to achieve both outcomes through varied answers?

Unplugged activity – children to screenshot their program and to state what happened.

Vocabulary: Selection, condition, conditional statement (the linking together of a condition and outcomes), debug

Session 3:

Using the recommended resources, children should be able to answer these questions:

How can we use conditions and selection to create a quiz on a particular topic? How can selection be used to control the outcomes based on the answers given? Can we use templates to support our design? How can we ensure both correct and incorrect responses are accepted? How can we ensure the sequence of questions suit the outcome? How can we test our program?

Unplugged activity – children to screenshot their quiz, then annotate and evaluate it.

Vocabulary: Selection, condition,

Future learning this content supports:

The content of this unit will support other units on using condition and selection within a program.
